

# Homeopathy's *Role in Addressing the* Over-Medication *Epidemic*

---

*Jennifer Jacobs, MD, MPH*

## Introduction

Homeopathy offers an alternative to the epidemic of over-medication that is currently sweeping the globe. Conventional medications carry many dangers, including adverse side effects, drug interactions, overdoses, and suppression of disease to deeper levels of health. Research shows that homeopathy is a viable treatment option for many common health problems, including childhood illnesses, depression, and chronic pain.

Many countries of the world are currently experiencing an epidemic that is largely ignored by the mainstream media—that of over-medication. The dichotomy between homeopathy and conventional medicine cannot be more extreme in this regard. In homeopathy, the minimum, infinitesimal dose is used to stimulate the body's innate self-healing response. Conversely, conventional medical practice bombards the body with many different drugs, exposing it to myriad side effects and drug interactions. More importantly, these drugs suppress the body's own ability to heal and lead to deeper, more serious illnesses.

## The Magnitude of Over-Medication

The statistics about over-medication are horrifying to those of us who have a respect for homeopathy and other holistic modalities. In the United States, 40 percent of people over age sixty-five regularly take five or more prescription drugs, a number that has tripled in the past twenty years.<sup>1</sup> Sixty-five percent take at least three, while as many as twelve percent take ten or more daily drugs. While more common in seniors, the use of multiple medications is prevalent throughout the entire U.S. population. In a recent survey, 21.8 percent of adults took three or more prescription drugs in the previous month while 10.7 percent took five or more.<sup>2</sup> Even in children, prescription drug use was found to be common—the same survey reported that one in four children had taken at least one in the previous month.

## The Dangers of Over-Medication

In 2014, it was reported that over three hundred people in the US die each day from side effects of drugs.<sup>133</sup> Can you

imagine the headlines and panic if three hundred people died each day from terrorist attacks? Another study estimated that there are more than four million outpatient visits each year for adverse drug reactions.<sup>134</sup> Another problem is accidental drug overdoses, which caused 47,000 deaths in the US in 2014—more fatalities than from traffic accidents.

## Homeopathy and Over-Medication

There are many studies that demonstrate how homeopathy could be used instead of conventional drugs to reduce the prevalence of over-medication. For childhood illnesses, my own work has shown that homeopathy can be used in place of antibiotics and other medications for ear infections, diarrhea, and colds and coughs.<sup>134 135 136</sup> The use of homeopathy for chronic health problems, including depression and chronic pain, has even more potential to reduce the over-medication epidemic.

## Depression

A recent survey found that more than 12 percent of people in the US were taking an antidepressant, including 26 percent of women between the ages of fifty and sixty-four. Yet an analysis by a group of international researchers reported that for every seven people treated with antidepressants, only one person would benefit.<sup>137</sup> The side effects of these medications are alarming—sexual dysfunction, violent and suicidal behavior, bleeding disorders, and an increased risk of diabetes and falls.<sup>138</sup>

On the other hand, we have good evidence of the efficacy of homeopathy in treating depression. In a recent study, one hundred and thirty-six middle-aged Mexican women with moderate-to-severe depression were randomized to receive either individualized homeopathic treatment, an antidepressant, or a placebo. After six weeks, the homeopathic group showed a statistically significant decrease in symptoms compared to placebo, with results that were equivalent to the group receiving the

antidepressant.<sup>139</sup> “These results are similar to those of a previous study, which reported that individualized homeopathic treatment was as effective as fluoxetine (Prozac) in the treatment of people with moderate or severe depression.”<sup>140</sup>

## Chronic Pain

Chronic pain is another area in which homeopathy can be beneficial. It is no secret that the over-use of opioid pain relievers has led to innumerable lives ruined or lost from addiction and inadvertent overdoses. Even over-the-counter pain medications carry considerable risks of side effects. Acetaminophen causes more than 40 percent of acute liver failure cases in the US and is the reason for more than 100,000 calls to Poison Control Centers each year.<sup>141</sup> Misuse of non-steroidal anti-inflammatory drugs (NSAIDs), such as aspirin and ibuprofen, leads to more than 100,000 hospitalizations and 16,000 deaths per year.<sup>141</sup> In a German study, one hundred twenty-nine adults who had suffered from low back pain for an average of seven years were treated with individualized homeopathic medicines over the course of the next two years.<sup>142</sup> At the end of that time, there were significant reductions in the severity of their symptoms, their quality of life improved, and their use of conventional health services and drugs decreased markedly. In a randomized, double-blind trial comparing a homeopathic gel with a topical NSAID for osteoarthritis of the knee, the homeopathic gel was at least as effective, if not more so, than the NSAID.<sup>143</sup>

## Alzheimer's Disease and Dementia

One subject about which I have particular concern is the growing incidence of dementia, which I believe is partly caused by the overuse of conventional drugs. The Alzheimer's Association estimates that one in nine people

over age sixty-five in the US has this disease.<sup>144, 145</sup> By 2050, they estimate this number will triple—from five million to as many as sixteen million people, each one with a family that is burdened financially and emotionally by the disease. Mental impairment and dementia are associated with many of the most commonly prescribed medications for high cholesterol, acid reflux, allergies, anxiety, urinary incontinence, and depression. This comes as no surprise to those of us who have studied homeopathy since we know that suppressing physical symptoms only drives disease deeper to the mental and emotional levels. Instead of enhancing health, conventional medications are making people sicker. Yet many, if not all, of these health problems, can be successfully treated with homeopathy.

I am optimistic that this epidemic of over-medication will subside as more and more people become aware of the dangers of taking so many drugs. Just as we look back with honor at the use of leeches and bleeding two centuries ago, my hope is that in the future, people will regard the current over-reliance on pharmaceutical drugs with equal dismay.

### ***About The Author:***

*Jennifer Jacobs, MD, MPH is a retired family practice physician who specialized in homeopathy. She also has published ground-breaking homeopathic research in conventional medical journals. She served on the board of the AIH for many years and as its president from 2000-2003. Her forthcoming book, "Do You Really Need That Pill?" addresses more fully the disturbing epidemic of over-medication. It will be available on Amazon and elsewhere in June, 2018.
